

911TRACKER®

Safety – Security – Simplicity!™

How 911TRACKER T1 works

STEP 1

THIEF breaks into your car and T1 immediately sends a message to the vehicle Owner

STEP 2

OWNER receives notification, verifies event, and then enters PIN number and command for T1 to make silent 3-way call directly from vehicle to 911

STEP 3

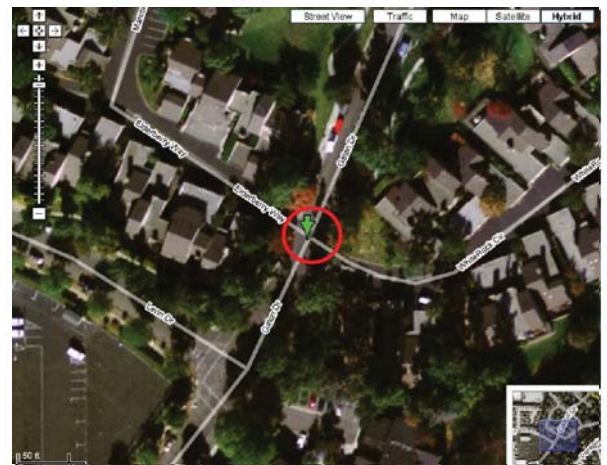

911 receives the call from T1 and talks with the Owner to understand the emergency while viewing vehicle location on their screen

911TRACKER T1

T1 can save lives, help prevent accidents, and stop thieves!

T1 guards your vehicle 24/7 even if you are thousands of miles away.

- If a thief trips your vehicle alarm, T1 sends your mobile phone an SMS (text) message with status and GPS location.
- You then command the T1 to call 911. Patented **911TrackDirect** shows Police real-time vehicle location immediately!
- If you want to know where your vehicle is at any time, just send T1 an SMS (text) message or an e-mail and T1 will send the **Google Map** location to your mobile phone browser or computer screen.
- If you can't find your vehicle & suspect it has been stolen, send an SMS (text) message from your mobile phone causing the T1 to make a 3-way call directly to the vehicle's local 911.
- You can even view where your vehicle has traveled in the past!
- T1 also lets you know if your vehicle has traveled outside a location that you specify, or if it enters a particular location.
- T1 can also let you know if your vehicle is going over any speed that you set! **Parents love this feature.**

Google® Map location viewed by owner or 911 using mobile phone browser or computer
