

Sean from Clayton, CA --

After nearly three months, my 911Tracker has protected my '57 Chevy and performed flawlessly. Three words come to mind: Simplicity, Reliability, and Accuracy.

Simplicity: The device is easy to install and it takes care of itself. Was able to conceal it in a subtle location that is difficult to find, but still check the LED function indicator when (or if) needed. Everything is controlled from my smartphone with simple text messages.

Reliability: No hiccups. The device runs off of vehicle battery power, but it also has its own battery just in case. I use a remote battery disconnect to prevent "hot-wiring" but that won't prevent someone from towing the vehicle away. Alarms just make noise that people tend to ignore. The design of this system is pretty much bullet-proof. In the basic mode, if your vehicle moves without use of the ignition, you get a text message saying so. I can forward the location and direction of travel of my vehicle to law enforcement in real time within minutes of a theft.

Accuracy: When vehicle location is displayed on the map, it is spot on. I have tested it in large parking lots using the Google map satellite imaging. The arrow virtually points to the actual stall my vehicle is occupying. I left my vehicle overnight at a mechanic's garage and was able to confirm that it was indeed parked inside the garage. When parked in my own garage, I can tell what side of the garage and which direction the vehicle is facing.

I am very impressed with 911Tracker. It is affordable and the peace of mind alone makes this system worth the price. The security it provides is priceless!
